

Attention Developers:

Large planned housing units (such as man camps) that are proposing to have an independent water source (a well rather than a municipal or rural water hookup) may need a water use permit from the Office of the State Engineer/State Water Commission. Before constructing a multiple housing unit that includes an independent water source (a well rather than a municipal or rural water hookup), the Appropriations Division of the State Water Commission should be contacted (701-328-2754, [swcapprop@nd.gov](mailto:swcapprop@nd.gov)) to determine if a water use permit is required.
